Executive Summary

LoopStack AI is a UK-based AI venture studio building sector-specific, AI-powered SaaS products for underserved industries. Our model is simple: identify industries burdened by regulation, manual process, and expensive professional intermediaries — then build focused, affordable products that give SMEs enterprise-grade capability at a fraction of the cost.

Three products are already live and fully operational. A fourth is in active development. All products have been designed, built, and deployed by the founder — a rare signal of technical capability and speed of execution at pre-seed stage.

Company	LoopStack AI — UK-based, pre-incorporation (Ltd formation in progress)
	Pre-seed — three live products, pre-revenue SaaS
Raising	£100,000 – £150,000
	Open to discussion — reflecting value, expertise, and strategic fit
Use of funds	Marketing (40%), Product dev (30%), Operations (20%), Contingency (10%)
	£1M+ across portfolio within 18 months of investment
Exit routes	Strategic acquisition per product, portfolio sale, or Series A + trade sale
	Andrew Hatcher — 30+ years in IT, recruitment, web development & AI
Website	loopstack.uk tenurai.co.uk app.loopstack.uk

02

The Business

What We Do

LoopStack AI is a UK venture studio that designs, builds, and operates sector-specific AI SaaS products. Rather than building generic AI tools, we identify underserved UK industries facing regulatory complexity, rising costs, and outdated processes — then build focused, affordable products that give SMEs access to enterprise-grade capability.

Our Approach

The studio model gives us a structural advantage: shared infrastructure, shared AI tooling, and a proven development playbook means each successive product is cheaper and faster to build than the last. We ship fast, price accessibly, and own the vertical before larger players react.

- **Vertical focus:** Each product is built for one industry, not adapted from a generic tool.
- **Regulation as a catalyst:** We time launches around legislative change — which creates urgency and eliminates the need for product education.
- **SME pricing:** Products are priced to be immediately affordable to independent operators, driving fast adoption.
- **Global architecture:** Built UK-first for validation, but architecturally designed for international expansion.

Why This Model Works

The venture studio model allows LoopStack to spread risk across multiple verticals while building compounding value. Each product launched adds a new ARR stream, a new user base, and a new potential acquisition target. The founder's cross-sector experience — spanning recruitment, property, technology, and construction — means each vertical is entered with genuine domain knowledge, not just technical capability.

Market Opportunity

LoopStack's three target markets collectively represent hundreds of billions in UK economic activity — yet all three remain underserved by modern AI tooling. Each market has a specific, identifiable trigger that creates an urgent, immediate need for our products.

£4.3
B

UK Private Rental Market

4.6M private landlords and 17,000+ letting agencies. The Renters' Rights Act 2025 has created the most significant legislative overhaul in decades — abolishing Section 21, introducing new Section 8 grounds, and adding 15+ new obligations overnight. Every letting agent in the UK needs compliance support immediately.

TenurAI TAM at 10% penetration: ~£20M ARR

£4.8
B

UK Recruitment Industry

40,000+ agencies, most operating with outdated software. AI-augmented recruiters are already outcompeting on placement speed and candidate quality. Independent consultants and boutique agencies lack access to enterprise-grade AI tools — TalentForge fills that gap.

TalentForge TAM at 10% penetration: ~£48M ARR

£150
B

UK Construction & Trades

1M+ tradespeople and SME contractors with no professional AI quoting, contracting, or compliance tool built for them. The sector is the last major UK industry without dedicated AI tooling. BuildaQuote is a first-mover in an enormous, digitisation-lagging market with clear global expansion potential.

BuildaQuote: UK + AU, US, CA global expansion

Why Generic AI Cannot Compete

Generic large language model tools — ChatGPT, Copilot, and similar — cannot reliably draft legally-informed UK lettings notices, screen candidates against specific role requirements, or generate accurate building trade quotes. They require sector-specific training data, UK regulatory accuracy, and workflow integration. LoopStack's products are built with these requirements from the ground up — giving us a defensible position that generic tools cannot easily replicate.

04

Products & Services

Every product in the LoopStack portfolio is either fully built and live, or in active development. Investors are not funding development promises — they are funding growth of working software.

01 LoopStack AI Agency

loopstack.uk

A UK-based AI automation agency that builds custom workflows, AI chatbots, document intelligence pipelines, and CRM automation for businesses. The agency generates immediate project and retainer revenue while serving as the technical studio that builds our SaaS products.

Tools: Workflow Automation (Make, n8n, Zapier) | AI Chatbots & Agents | Document Intelligence | CRM & Sales Automation | Custom API Integrations | Reporting & Analytics

Pricing: Projects from £997 | Growth projects £2,497 | Retainers from £799/mo

Market: Studio backbone + immediate cash flow

02 TenurAI

tenurai.co.uk | app.tenurai.co.uk

An AI compliance co-pilot for UK letting agents. The Renters' Rights Act 2025 has abolished Section 21 and introduced 15+ new legal obligations overnight. TenurAI drafts Section 8 notices, tracks compliance deadlines, audits tenancy portfolios, and answers legislation questions in plain English — replacing £200–£400/hr solicitor consultations for routine compliance work.

Tools: Section 8 Notice Drafter | Compliance Q&A; (AI) | Deadline Tracker | Tenancy Audit Tool | Legislation Update Alerts | Multi-Office Dashboard

Pricing: Starter £49/mo (1 office, 50 properties) | Professional £99/mo (3 offices, 250 properties) | Agency £199/mo (unlimited)

Market: Target: 17,000 UK letting agencies

03 TalentForge AI

app.loopstack.uk

A suite of six AI-powered tools purpose-built for recruitment consultants and agencies. TalentForge compresses hours of manual placement work into minutes, giving independent recruiters and boutique agencies the same AI capability as global staffing firms — at a fraction of the cost.

Tools: JD Writer — bias-free job descriptions in seconds | Candidate Outreach — personalised LinkedIn & email | CV Screener — instant candidate scoring | Interview Questions — role-specific with scoring guides | Client Pitch Generator — win new mandates | Psychometric Tests — SHL-style test packs

Pricing: SaaS subscription tiers (in final pricing development)

Market: Target: 40,000+ UK recruitment agencies

04 BuildaQuote

In development

A full-stack professional platform for UK tradespeople and SME contractors — the market's first AI-driven quoting, contracting, and compliance tool built specifically for the trades. BuildaQuote addresses the last major UK industry without dedicated AI tooling, with clear global expansion potential.

Tools: AI Quote Builder with photo references | Building Regulations AI Advisor | Live Supplier Price Integration | AI-Generated Client Contracts | Invoice & Payment Management | Expenses Tracker & Project CRM

Pricing: SaaS subscription model — UK launch, then AU, US, CA expansion

Market: Target: 1M+ UK tradespeople + global

05

Business Model & Revenue

LoopStack operates three compounding revenue streams that grow independently while reinforcing each other. The agency generates immediate cash flow; SaaS subscriptions build predictable MRR; and each new product launch adds another revenue line.

01 Agency Projects & Retainers

Bespoke AI automation projects and ongoing retainer agreements for UK businesses. No long sales cycle — businesses with automation pain come to us.

- Projects: £997 (Starter) to £2,497 (Growth)
- Monthly retainers: £799/month
- Typical client: Operations, finance, or sales teams with repetitive workflows
- Immediate cash flow — funds studio operations

02 SaaS Subscriptions — TenurAI

Monthly recurring revenue from UK letting agencies. Compliance-dependent products have naturally low churn — agents cannot afford to drop a tool their workflow depends on.

- Starter: £49/mo — 1 office, up to 50 properties
- Professional: £99/mo — up to 3 offices, 250 properties
- Agency: £199/mo — unlimited offices and properties
- Target: 500 subscribers = £49,500–£99,500 MRR

03 SaaS Subscriptions — TalentForge

Monthly recurring revenue from recruitment consultants and agencies. Workflow-integrated tools create strong retention — recruiters who use TalentForge daily will not switch to inferior alternatives.

- Tiered subscription model in final development
- Target market: 40,000+ UK agencies
- Estimated ARPU: £49–£99/month
- Target: 500 subscribers = £24,500–£49,500 MRR

04 Portfolio Expansion — BuildaQuote & Beyond

Each new vertical product adds a new ARR stream. BuildaQuote targets a larger market than TenurAI and TalentForge combined, with global expansion potential.

- UK launch → AU, US, CA expansion
- SaaS subscription model (tradesperson and contractor tiers)
- Potential for materials supplier referral/affiliate revenue
- Future verticals to be scoped from studio learnings

Competitive Moat

- **Compliance dependency:** TenurAI users cannot easily switch — their entire compliance record, deadlines, and documents live in the platform.
- **Workflow lock-in:** TalentForge becomes part of a recruiter's daily process. Switching means retraining and losing history.
- **UK regulatory specificity:** Deep UK lettings and employment law knowledge cannot be replicated by generic AI tools without significant investment.
- **First-mover advantage:** In each vertical, we are entering before significant competition has emerged — particularly in BuildaQuote.
- **Studio efficiency:** Shared infrastructure and playbook means lower cost-to-build for each successive product.

06

Traction & Proof

At pre-seed stage, the strongest proof is working software. LoopStack has it. All three initial products are fully built, deployed, and publicly accessible.

✓ TenurAI — Fully Live

app.tenurai.co.uk is a complete, functional SaaS application. Users can sign up, add properties and tenancies, run compliance audits, draft documents (Section 8 notices, prescribed information, rent increase notices, pet addenda, and more), track deadlines, and ask compliance questions via AI chat. The founding member campaign is live, offering 50% off the first 3 months for the first 50 agencies.

✓ TalentForge AI — Fully Live

app.loopstack.uk is a complete, functional SaaS application with all six AI recruitment tools operational: JD Writer, Candidate Outreach, CV Screener, Interview Questions, Client Pitch Generator, and Psychometric Tests. The platform is live and accepting users.

✓ LoopStack Agency — Trading

loopstack.uk is a live, trading business with delivered projects and client testimonials on site. The agency has demonstrated the ability to scope, build, and deliver AI automation solutions for UK businesses — validating the technical capability underpinning all studio products.

■ BuildaQuote — In Development

BuildaQuote is in active scoping and development. The concept has been validated through the founder's network within the UK trades sector. Development will accelerate post-investment.

Go-To-Market Strategy

Each product has a distinct target audience and acquisition channel. Investment enables us to activate these channels at scale.

TenurAI — Letting Agents

- **Industry associations:** ARLA Propertymark (17,000+ member agents), NALS, and UKALA — direct access to our entire target market.
- **PropTech press & content:** Articles, guides, and commentary around the Renters' Rights Act — the legislation is our marketing hook.
- **Google Search (PPC & SEO):** High-intent keywords around "Section 8 notice template", "lettings compliance software", "Renters Rights Act tools".
- **Founding member campaign:** Already live — 50% off first 3 months for first 50 agencies creates urgency and early social proof.
- **Referral programme:** Letting agents talk to each other. A structured referral incentive accelerates word-of-mouth.

TalentForge — Recruitment Agencies

- **LinkedIn targeting:** Direct outreach and paid ads targeting recruitment agency owners and senior consultants in the UK.
- **Recruitment communities:** The Recruitment Network, APSCo, REC — established bodies with direct access to our target users.
- **Content marketing:** Practical AI guides for recruiters — positions TalentForge as a thought leader before the sale.
- **Free trial funnel:** Low-friction sign-up with a generous trial period converts curious users to paying subscribers.
- **Agency partnerships:** Whitelabel or reseller arrangements with recruitment software providers to reach their existing customer base.

BuildaQuote — Tradespeople & Contractors

- **Trades associations:** FMB (Federation of Master Builders), NICEIC, Gas Safe Register — direct routes to verified tradespeople.
- **TikTok & Instagram:** The trades community is highly active on short-form video — product demos perform exceptionally well.
- **Google Search:** High-intent keywords around "quoting software for builders", "building regulations advice app".
- **Supplier partnerships:** Integration with major trade suppliers (Screwfix, Travis Perkins) creates a distribution channel and adds product value.

Roadmap

Investment compresses the timeline from product-live to revenue-generating, and accelerates entry into the next vertical.

Q2 2026	Launch & Acquire First Paying Customers TenurAI and TalentForge marketing campaigns go live. Founding member campaign for TenurAI drives first 50 subscribers. TalentForge outreach campaign targets independent recruiters and boutique agencies. LoopStack agency retainer base grows to 3+ clients.
Q3 2026	Scale Marketing & Hit 100 Subscribers Combined paid digital, SEO, and content marketing across TenurAI and TalentForge. Target: 100+ paying subscribers combined. First case studies and testimonials published. TenurAI professional tier adoption grows with multi-office agencies.
Q4 2026	Feature Expansion & Higher ARPU TenurAI Agency tier launches with API access and custom document templates. TalentForge team accounts and ATS integration development begins. Increased ARPU across both products. BuildaQuote MVP development begins with investment funds.
Q1 2027	BuildaQuote Private Beta Private beta launch with 50 tradespeople. Validate AI quoting accuracy, contract generation, and supplier price integration. Gather feedback for public launch. Series A preparation and financial narrative begins.
Q2-Q4 2027	Scale, Expand & Series A BuildaQuote public launch. TenurAI expansion scoping for Australian and Irish rental markets. TalentForge global rollout planning. Target: £1M ARR across portfolio. Series A fundraise to accelerate international expansion and further product development.

09

Use of Investment

The £150,000 raise is targeted precisely at the activities that convert built products into paying customers — and paying customers into a fundable Series A story.

40%**£60,000****Marketing & Customer Acquisition**

- Paid digital advertising (Google, LinkedIn, Meta) targeted at letting agents and recruiters
- SEO content strategy — legislation-led articles that rank for high-intent search terms
- PR and trade press outreach to PropTech and recruitment publications
- Outreach to industry associations (ARLA, REC, APSCo, FMB)
- TenurAI founding member campaign activation and referral programme

30%**£45,000****Product Development**

- TenurAI Agency tier — API access, custom templates, multi-user management
- TalentForge team accounts and ATS integration development
- BuildaQuote MVP build — AI quoting engine, building regs advisor, contract generator
- Infrastructure scaling and AI API cost management

20%**£30,000****Operations & Infrastructure**

- Cloud infrastructure scaling (AWS/GCP) as user base grows
- AI API costs (Claude/OpenAI) at scale
- Legal and accounting support
- Customer support tooling and processes

10%**£15,000****Working Capital & Contingency**

- Runway buffer to ensure stability through the traction phase
- Flexibility to respond to unexpected opportunities or market changes

Financial Projections

The following projections are based on conservative subscriber growth assumptions following investment deployment. They represent a realistic base case, not an optimistic scenario. All figures are illustrative and subject to market conditions.

Revenue Model Assumptions

- TenurAI average revenue per user (ARPU): £79/month (blended Starter/Professional mix)
- TalentForge ARPU: £59/month (estimated — pricing in final development)
- LoopStack agency: 3 retainer clients at £799/month + 2 projects/month at £1,500 avg
- Monthly churn assumption: 3% (industry standard for compliance-dependent SaaS is lower)
- Marketing spend begins Month 1 post-investment; subscriber growth lags by 6–8 weeks

	Month 6	Month 12	Month 18	Month 24
TenurAI subscribers	50	150	300	500
TenurAI MRR	£3,950	£11,850	£23,700	£39,500
TalentForge subscribers	30	100	200	400
TalentForge MRR	£1,770	£5,900	£11,800	£23,600
Agency retainer MRR	£2,397	£3,196	£3,995	£4,794
BuildaQuote MRR	—	—	£2,500	£8,000
Total MRR	£8,117	£20,946	£41,995	£75,894
Annualised ARR	£97,404	£251,352	£503,940	£910,728

Note: These projections are illustrative estimates based on conservative market penetration assumptions. Actual results may vary materially. This does not constitute a financial forecast for regulatory purposes.

Path to Series A

At Month 18–24, with £500k–£900k ARR across the portfolio and BuildaQuote in market, LoopStack will be well-positioned for a Series A raise to fund accelerated international expansion. The pre-seed investment round creates the traction narrative required to approach institutional investors at favourable terms.

Management Team

LoopStack AI is founded and led by a solo technical founder with the rare combination of domain expertise, technical depth, and commercial experience needed to build, sell, and scale vertical SaaS products.

AH

Andrew Hatcher

FOUNDER & CEO — LOOPSTACK AI LTD

Andrew brings over three decades of cross-sector experience spanning IT, high-scientific and technical recruitment, web design, and AI development — operating across the UK, USA, Canada, and Spain.

His 20+ years as a specialist recruitment consultant focusing on Defence and Embedded Systems gives him direct domain knowledge of the market TalentForge serves. His 20+ years in web design and 3+ years building AI-powered products mean he has personally designed, built, and deployed every product in the portfolio.

Every app is live. No outsourcing. No co-founder dependency. A rare combination of technical depth, commercial experience, and domain expertise across all three target markets.

Key Skills & Experience

30+ Years in Technology

IT systems, enterprise software, web development across UK, USA, Canada and Spain.

20+ Years in Recruitment

Specialist in Defence and Embedded Systems. Deep knowledge of recruiter workflows, pain points, and tools.

20+ Years Web and Design

Full-stack web development, UI/UX design, and brand identity. All LoopStack products are founder-designed.

3+ Years in AI Development

Applied AI and LLM development — building production applications using Claude, OpenAI, Make, n8n, and Zapier.

Cross-Sector Domain Knowledge

Unique combination of expertise across the three target verticals: property/lettings, recruitment, and technology.

Planned Team Expansion

Post-investment, the founder plans to bring in targeted support: a part-time marketing specialist with SaaS or PropTech experience to drive subscriber acquisition, and a customer success resource once the subscriber base exceeds 100. The studio model means technical development remains centralised and efficient.

Risk & Mitigation

Risk	Likeliho od	Impa ct	Mitigation
Slow customer acquisition — products take longer than projected to gain paying subscribers	Medium	High	40% of investment dedicated to marketing. Multiple products reduce single-product dependency. Agency revenue provides base cash flow.
Competition — larger PropTech or HR tech players launch competing products	Medium	Mediu m	First-mover advantage. Compliance dependency creates switching costs. UK regulatory specificity is hard to replicate quickly.
Regulatory change — UK lettings legislation changes in a way that reduces TenurAI's value	Low	Mediu m	More legislation = more TenurAI value, not less. Portfolio model means TenurAI is one of four revenue streams.
AI API cost increases — underlying AI costs rise materially	Low	Low	Pricing includes margin for AI costs. Usage-based API pricing scales with revenue. Switching between AI providers is feasible.
Key person risk — founder illness or incapacity	Low	High	Planned team expansion post-investment. Full documentation of all systems and codebases. Investor involvement provides continuity.
Churn — users sign up but do not retain	Medium	Mediu m	Compliance-dependent products have structurally low churn. Customer success resource planned. Continuous feature development retains users.

13

The Deal

We are offering equity in LoopStack AI in return for investment of £100,000–£150,000. The equity percentage is open to discussion and will reflect the investor's financial contribution, sector experience, and strategic value to the business.

Investment Sought

£100,000 – £150,000

Pre-seed round | Equity open to discussion

What You Are Investing In

- **Three fully-built, live products** — development risk is behind us. Investment goes to growth.
- **A proven founder** — 30+ years of cross-sector experience including direct domain expertise in two of the three target markets.
- **Three large, addressable markets** — lettings, recruitment, and construction represent hundreds of billions in UK economic activity.
- **Legislation-driven timing** — the Renters' Rights Act 2025 creates an urgent, immediate need for TenurAI. We are entering at exactly the right moment.
- **Portfolio model** — multiple products reduce single-product risk. If one product scales faster, it funds the next.
- **Global potential** — UK validation, then AU, US, CA expansion — particularly BuildaQuote and TalentForge.

Ideal Investor Profile

We welcome investors who bring more than capital. The ideal investor has experience in one or more of the following: PropTech or property investment, HR technology or the recruitment sector, construction or the built environment, or SaaS scaling and B2B software distribution. Strategic introductions, sector networks, and mentorship are as valuable to us at this stage as the investment itself.

Exit Strategy

- **Strategic acquisition (per product):** Each product is a standalone acquisition target. TenurAI for a PropTech platform, TalentForge for an HR/recruitment SaaS company, BuildaQuote for a construction software provider.
- **Portfolio acquisition:** The studio as a whole becomes attractive to a larger AI or vertical SaaS group seeking a ready-made UK presence across multiple sectors.
- **Series A and beyond:** Once the portfolio reaches meaningful ARR, a Series A funds accelerated international growth, with a longer-term IPO or trade sale exit for early investors.

Note on EIS/SEIS

EIS and SEIS eligibility is being confirmed with our accountants. If eligible, this would provide early investors with significant UK income tax relief (50% for SEIS, 30% for EIS) on their investment. We will confirm status ahead of closing the round.
