

Google SEO & GEO Audit Report

tkd-uk.com

Generated: June 18, 2026

Report Created by LoopStack Ai Consultants

Credential Tier: 1 (API Key + Service Account)

Executive Summary

Taekwon-Do UK has critical mobile performance issues (48/100) with a 15.3s Largest Contentful Paint. The site is not verified in Google Search Console, meaning no search performance data is available. CrUX field data is absent due to insufficient Chrome traffic. GEO readiness is weak: no llms.txt, no structured data, and no dedicated AI crawler configuration. Immediate priorities: GSC verification, performance optimisation, implementing llms.txt, and adding LocalBusiness schema markup.

1. PageSpeed Insights - Mobile

Lighthouse lab data collected via PageSpeed Insights API v5 on 2026-06-18.

Performance Score

Core Web Vitals (Lab)

First Contentful Paint (FCP)	10.4 s	(Poor)
Largest Contentful Paint (LCP)	15.3 s	(Poor)
Total Blocking Time (TBT)	300 ms	(Needs Improvement)
Cumulative Layout Shift (CLS)	0.085	(Needs Improvement)
Speed Index	10.6 s	(Poor)
Time to Interactive	16.7 s	(Poor)

Key Opportunities

- Reduce unused JavaScript - ~500 KiB savings (3.1 s wasted)
- Reduce unused CSS - ~77 KiB savings potential
- Enormous network payload - 3,000 KiB total page weight
- JavaScript execution time - 1.7 s on main thread
- Max Potential First Input Delay - 260 ms

2. PageSpeed Insights - Desktop

Performance Score

Core Web Vitals (Lab)

First Contentful Paint (FCP)	1.9 s	(OK)
Largest Contentful Paint (LCP)	2.2 s	(Needs Improvement)
Total Blocking Time (TBT)	190 ms	(Needs Improvement)
Cumulative Layout Shift (CLS)	0.186	(Needs Improvement)
Speed Index	2.1 s	(OK)

3. CrUX Field Data

CrUX (Chrome UX Report) data is not available for this site. The API returned 404, indicating insufficient Chrome user traffic volume to report field data. This is common for smaller local business websites. Real-user metrics (LCP, INP,

CLS) cannot be assessed from field data at this time.

4. Knowledge Graph Presence

Knowledge Graph Search API queried for brand-related terms.

Query	Result	Score
"tkd uk taekwondo"	Taekwondo (martial art)	2.18
"tkd uk taekwondo"	ITF (org)	0.16
"TKD UK"	ITF (org)	0.24
"TKD UK"	Taekwondo (martial art)	0.12

Brand not recognized as a distinct Knowledge Graph entity. The organisation "Taekwon-Do UK" does not have its own Knowledge Panel. This is typical for smaller organisations and should be targeted through entity-building SEO (Wikipedia, Wikidata, LocalBusiness schema, authoritative citations).

5. YouTube and AI Visibility

YouTube brand mentions have the strongest correlation with AI visibility (0.737).

Search for "TKD UK taekwondo" returns primarily generic taekwondo content - no dedicated TKD UK branded channel surfaced in top YouTube results.

- No branded TKD UK YouTube channel detected in top search results
- YouTube content would significantly boost AI/GEO discoverability
- Consider uploading class demos, tournament footage, grading ceremonies

6. Content Analysis

The page has approximately 2,340 words of extractable visible text - relatively thin for competitive local SEO in martial arts.

Page Topics Identified

- ITF Taekwon-Do instruction
- Free trial / new beginners welcome
- Club locator functionality
- Grading: 3-4 belts per year
- National / European / World championship competition
- Children, junior and adult classes

Content Issues

- Thin text content - under 3,000 words for a competitive local page
- No blog or news section detected - limits topical authority signals
- Limited internal linking structure observed
- No FAQ or educational content about Taekwon-Do

7. GEO Readiness - AI Search Visibility

Generative Engine Optimisation (GEO) assesses how well a site can be discovered and cited by AI-powered search engines like Google AI Overviews, ChatGPT, Perplexity, and Bing Copilot. The following dimensions were evaluated.

Overall GEO Score

AI Crawler Accessibility		4/10
llms.txt / AI Guidance		0/10
Structured Data (Schema)		0/10
Content Depth & Citability		3/10
Entity Recognition (KG)		2/10
Brand Mention Signals		1/10
GEO Readiness Total		10 / 60

7.1 AI Crawler Accessibility

Squarespace-generated robots.txt is in place. AI crawler analysis:

- [!] GPTBot, CCBot, Google-Extended, anthropic-ai are listed but with NO explicit rules - they fall back to the catch-all (*)
- [~] Claude-Web and PerplexityBot are not mentioned in robots.txt at all
- [~] Catch-all (*) blocks /config, /search, /account, /api/, /static/ and various query parameters
- [+] Core pages, images and content are crawlable

Verdict: Functional but not optimised for AI crawlers. Named AI crawler directives should be explicitly configured rather than relying on catch-all fallback.

7.2 llms.txt / AI Guidance File

- [!] No llms.txt file found (404)
- [!] No llms-full.txt or ai.txt present

An llms.txt file provides AI crawlers with a curated summary of your site, helping them understand your content hierarchy and cite you accurately. This is the single highest-impact GEO fix.

7.3 Structured Data (Schema.org)

- [!] No JSON-LD structured data detected anywhere on the page
- [!] No LocalBusiness, Organization, or Service schema present
- [!] No breadcrumb, FAQ, or Article schema detected

Structured data is how you explicitly tell search engines and AI models what your business is, where you operate, and what services you offer. Without it, AI models must infer this from unstructured text, reducing citation confidence.

7.4 Content Depth & Passage Citability

- [!] Only ~2,340 words of extractable text - thin for AI citation
- [!] No FAQ content that AI systems commonly pull answers from
- [~] Content is structured as paragraphs but lacks clear passage markers
- [+] Clear CTAs and contact information present

AI search engines favour content that is well-structured, authoritative, and directly answers specific questions. The current page is too thin for reliable AI citation.

7.5 Entity & Brand Recognition

- [!] No Knowledge Panel - brand not recognised by Google Knowledge Graph
- [!] No Wikidata entry detected
- [~] ITF Taekwon-Do (generic) has a Knowledge Graph entry, but specific brand TKD UK does not

AI models learn about entities from structured knowledge bases. Without Knowledge Graph or Wikidata presence, TKD UK is harder for AI to verify as a legitimate organisation.

8. Indexing Status

The site is NOT verified in Google Search Console. This means:

- Cannot monitor clicks, impressions, or average position
- Cannot submit sitemaps directly to Google
- Cannot run URL Inspection API for indexation status
- Cannot identify which queries drive traffic or quick-win opportunities
- URL Inspection via API failed (403) - no GSC access for this domain

GSC verification is the single highest-impact action item.

9. Recommendations and Action Plan

Priority 1: Critical - GSC Verification

Verify tkd-uk.com in Google Search Console (domain property recommended). This unlocks all search performance data, index monitoring, sitemap submission, and quick-win identification.

Priority 2: Critical - Mobile Performance

Mobile Performance score of 48/100 with 15.3s LCP is catastrophic. Audit the 3 MB page weight: enable image optimisation (WebP, responsive srcset, lazy loading), eliminate 500 KiB of unused JavaScript, and reduce unused CSS (77 KiB).

Priority 3: Critical - Implement llms.txt

Create an llms.txt file at /llms.txt with a curated summary of the site, key pages, and what TKD UK offers. This is the single quickest GEO win and directly signals AI crawlers to index and cite your content.

Priority 4: High - Add Structured Data

Implement LocalBusiness + Organization schema markup in JSON-LD format. Include name, description, location, contact, and service area. Add breadcrumb and FAQ schema to subpages.

Priority 5: High - Layout Stability (CLS)

CLS of 0.085 mobile / 0.186 desktop needs improvement. Investigate late-loading resources causing layout shifts. Set explicit dimensions on images and banners.

Priority 6: High - Entity Building

Build toward a Knowledge Panel: implement LocalBusiness + Organization schema markup, create/claim a Wikipedia page or Wikidata entry, ensure NAP consistency across all citation sources, and build authoritative backlinks.

Priority 7: Medium - YouTube Presence

Create a branded TKD UK YouTube channel with class previews, tournament highlights, and grading ceremonies. YouTube visibility has a 0.737 correlation with AI search appearance.

Priority 8: Medium - Content Depth

Expand page content beyond 3,000 words. Add FAQ section about Taekwon-Do benefits, class structure, belt system, and instructor credentials. Consider a blog for ongoing topical authority.

Priority 9: Low - Desktop Performance

Desktop score of 64/100 is acceptable but improvable. The same fixes for mobile (images, JS, CSS) will benefit desktop as well.
